

Choosing the right host can make all the difference in how fast your website loads and how easy it is to use. You don't want your server to be overloaded with traffic, causing your site to load slowly, or worse, crash! Make sure your website stays up and running with these tips on finding the best hosting platform.

PS: Are you a Nigerian resident abroad and you need to send money to your loved ones back home ? The stress is over now! Send money to Nigeria using the MonieWorld app. It's fast, easy and has great rates! MonieWorld is powered by Moniepoint. Sign up with my link <https://spoo.me/iy8taz>

What Is Web Hosting?

Web hosting is a service that allows organizations and individuals to post a website or web page onto the Internet.

A web host, or web hosting service provider, is a business that provides the technologies and services needed for the website or webpage to be viewed on the Internet.

Websites are hosted or stored, on special computers called servers. When Internet users want to view your website, all they need to do is type your website address or domain into their browser.

Why Should I Choose a Good Web Host?

A good web host will keep your website up and running smoothly, with little to no downtime. They will also offer you features like unlimited storage space, bandwidth, and email accounts.

Plus, a good web host will have excellent customer service in case you need any help.

What Are the Different Types of Web Hosting Services?

1) Shared hosting is the most popular type of web hosting, and is perfect for small-scale websites and blogs. With shared hosting, your website will be hosted on a server with other websites.

2) VPS hosting is great for medium-sized businesses or websites with high traffic. With VPS hosting, your website will be hosted on a virtual private server, giving you more control over your server environment.

(3) Dedicated hosting is ideal for large businesses or websites with very high traffic. You get a fully dedicated server for your business, which gives you all the power and stability that comes with owning your own physical hardware. If you're still not sure what kind of hosting best suits your needs, compare our top 5 hosts below !

- SiteGround
- Bluehost
- A2Hosting
- DreamHost
- InMotionHosting

How Do I Choose Between Them?

If you're running a website, you need a hosting platform that can keep it up and running reliably. But with so many options out there, how do you choose the best one for your needs?

Here are some things to consider when making your decision:

What features does the company offer?

Do they have an uptime guarantee or any type of support for their customers?

Do they offer domain registration services or other related features?

How much does it cost per month and what payment methods are accepted?

Does this company offer shared hosting or dedicated servers as well as VPSes (virtual private servers)?

How Much Should I Expect To Pay?

The cost of hosting a website can vary greatly depending on your needs. If you are just starting out, you can find shared hosting plans for as little as \$5 per month.

However, if you need more power or have a higher traffic website, you may need to pay \$10 or more per month. Additionally, some hosting providers offer discounts if you pay for multiple months in advance.

How Do I Get Started With My New Webhost?

So you've decided on a web host and are ready to get started with your new website. Congratulations! Now it's time to get started on the fun part: building your site. But first, you need to set up your hosting account.

Here's a quick guide on how to do that.

- 1) Fill out the sign-up form for your hosting service of choice.
- 2) Check your email inbox for an activation link or confirmation email from the company's support team.
- 3) Click or tap on this link/email to confirm your purchase. Next, enter your billing information (name, address, credit card number). After filling in the necessary fields, click on Confirm Purchase. You should now be redirected to a page where you can log in to your account. Choose a username and password (this will be different than any other login info you may have used elsewhere), then enter them into the login boxes. Now you're taken to the control panel for your hosting account, which is called cPanel. In order to add a domain name (or make any changes at all) to your account, you'll need to add it through cPanel.

Action Point

PS: If you would like to have an online course on any of the courses that you found on this blog, I will be glad to do that on an individual and corporate level, I will be very glad to do that I have trained several individuals and groups and they are doing well in their various fields of endeavour. Some of those that I have trained includes staffs of Dangote Refinery, FCMB, Zenith Bank, New Horizons Nigeria among others. Please come on Whatsapp and let's talk about your training. **You can reach me on Whatsapp HERE.** Please note that I will be using Microsoft Team to facilitate the training.

I know you might agree with some of the points that I have raised in this article. You might not agree with some of the issues raised. Let me know your views about the topic discussed. We will appreciate it if you can drop your comment. Thanks in anticipation.
